

GEMOFOR
FOR A WORLD OF PERFORMANCE

GEM-O-WANE

Wane-Up System

ALWAYS AHEAD WITH **FRESH & INNOVATIVE SOLUTIONS...** THAT ARE SIMPLE AND EFFICIENT!

GEMOFOR's on-going quest for high-performance, innovative solutions has sparked the development of a fresh new approach to detecting profit-reducing lumber wane - the GEMOFOR Wane-Up System.

A benchmarking solution entirely designed by GEMOFOR's research and development center, the Wane-Up maximizes planer mill recovery by minimizing waste.

An electronic vision system is used to detect the presence of wane. Once it has been located on a piece of lumber, the system immediately sends a signal to set the wany face up. This technological breakthrough obviously results in stable profit-maximizing grade recovery.

Advantages

- Guaranteed lumber value recovery.
- No mechanical adjustments are required to process lumber from 2" x 3" up to 2" x 12" width.
- Can easily be fitted onto an existing planing mill line.
- Provides easy access to equipment without needing to stop production.
- A simple and efficient process that will never have to be adjusted to lumber size.

Operating Speed:

- Over to 230 pieces/minute.

Specifications

- A study performed by Forintek demonstrates that planing mill lines equipped with the Wane-Up System can increase profitability by 5 to 10 %.
- The same study showed that general lumber appearance can be improved significantly if the piece of lumber is fed into the planer wany face up.
